Got Commercial ?

Operating a property or HOA or property can be an extremely stressful position, let Elko Spas, Billiards and Pools take away some of your worries by providing your recreational service and product needs.

At Elko, we specialize in servicing commercial swimming pools in and around Horry, Brunswick and Georgetown counties. We provide our services and products for commercial pools such as subdivision pools, hotels, condominiums, hospitals, indoor pools, religious institution and other public swimming pools. We realize each commercial pool is unique, and we will develop a service plan to meet your specific needs. You can also be assured that all the people working at your property will be professionally trained and certified.

BILLIARD TIPS

THE BREAK

When shooting a game of pool, no one can begin the game until the cue balls are racked and ready to go. The opening shot may be the most important shot of the game.

Here is a five step routine which will increase your chances of a better break.

First: The most often missed step is the most important- Check the Rack. It is critical that you find a perfect triangle of frozen balls. Also, make sure the head ball and back row are frozen. This is your responsibility, get it right.

Second: Pick your technique--If you prefer an "off-the-rail break" settle into it and rely on it. If you prefer a table-break lock yourself into your best.

Third: Pick your exact spot with care. No problem if you want to change the spot you break from one break to the next. You will find each table presents different break conditions.

Fourth: Stroke, angle and speed. These are involved in every billiards shot and are no less important in the break shot. Your goal should be to maintain your best control, not break as hard as possible.

Fifth: Practice. Learn your best break technique. If you find you are better aiming at the head ball or the second ball, work on these until you can perfect them.

Help Us Help Our Children

Prom is becoming increasingly more expensive for students and their parents. It's no surprise that not everyone can afford this special night, however we can all remember the excitement and anticipation of our prom. Join us in helping our community by donating any of your formal wear and accessories. Elko is a drop off site and proud supporter of Katie's Project.

Bella aqua

Proper water chemistry is essential to maintaining a safe and consistent swimming pool environment. Chemicals used in swimming pools include: Disinfectants to destroy harmful or otherwise objectionable organisms; Alkalinity and pH Adjusters to maintain a consistent acid-base relationship and acid buffering capacity; Chlorine

Stabilizer to prevent unnecessary loss of chlorine; Algaecide to kill and prevent algae, and filter aids to help remove foreign material.

pH is the single most important element in swimming pool water chemistry. It affects every other chemical balance in pool water.

If pH is too low (below 7)

- Water becomes acidic
- Chlorine residuals dissipate rapidly
- Eye irritation occurs
- Plaster walls are etched
- Metal fittings, pump impeller, heater core may corrode
- Dissolved metals may leave stains on walls
- Rapid Loss of alkalinity

If pH is too high (above 8)

- Chlorine activity is slowed and inefficient
- Scale formation and discoloration of pool walls
- Water becomes cloudy
- Filter is overworked
- Eye irritation may occur

Please send us a photo of you, your family and/or friends "Just Relax'N" with any Elko products. We will do our best to post them on our website, facebook and newsletter! Just send them to melko@elkospasandbilliards.com.

POOL DRAIN & CLEAN
